

Maintaining Whole Systems

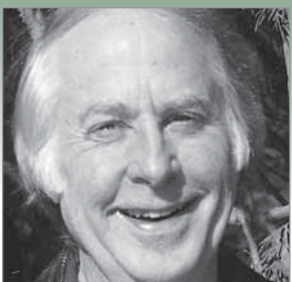

On Earth's Crown

BOREAL FORESTS FOR THE FUTURE

Wednesday, April 29 7:00pm

George Ignatieff Theatre, Trinity College
(15 Devonshire Place, NW Corner of Larkin Building, ground floor)

Moderated by Gord Miller, Ontario Environment Commissioner

Herb Hammond is a forest ecologist, pioneer of ecosystem-based conservation planning and author of the award-winning book, *Seeing the Forest Among the Trees*.

Professor Jeremy Kerr is a Professor of Biology at the University of Ottawa and is a member of the International Boreal Conservation Science Panel.

Professor Deborah McGregor, Deborah McGregor is Anishnabe from Wiigwasingaa (Whitefish River First Nation). She is an Assistant Professor in Geography and Aboriginal Studies at the University of Toronto.

Professor James Schaefer is a Professor of Biology at Trent University in Peterborough, Ontario and is a member of the International Boreal Conservation Science Panel.

Ontario and Canada's spectacular Boreal forests are at a crossroads. Unsustainable forestry, other industrial activities, and a lack of proper monitoring have stressed it to its limits: woodland caribou are on the verge of extinction; significant intact forests are being lost; communities are collapsing.

A new approach to conserving and managing this globally important forest is urgently needed. Learn of this new approach, which combines scientific knowledge, Indigenous knowledge, and intuition to maintain and restore ecosystems—the home systems—that sustain all life.

Hosted by the Faculty of Forestry at the University of Toronto
